**Introduction.**

Non-clinical (reception) staff are usually the first port of call for patients who access care in general practice, but what guides their decision making? Systems and processes support reception staff to safely and appropriately triage patients. The clinical team need to provide input into triage policies, decision-making tools, protocols and referral processes. They should also facilitate training for reception staff to recognise ‘redflags’, levels of urgency and need for care. Policies, procedures and guidelines support appropriate access to care and help avoid health and safety risks and medico-legal issues arising.

**Clinical team – Drive** the triage process.

To successfully implement a **safe** triage process, the clinical team must support reception staff. The **clinical team need to:**

- **determine** the ‘redflags’ that guide non-clinical staff decision making about urgency and the need for care
- **update** non-clinical staff on health alerts & notifications
- **provide and facilitate** triage training
- **develop** triage policies, procedures and decision-making guides (including who is responsible for calling 000)
- **support** reception staff when clinical decisions are required

**Reception staff – Implement** the triage process.

Reception staff are often the first port of call for patient access to care. They are usually non-clinical staff with varied skills, knowledge and experience. To implement a **safe** triage process, **reception staff need to:**

- **have access** to up-to-date policies, procedures and flow charts to guide decisions
- **communicate** effectively with patients, families and carers
- **determine** level of urgency and identify ‘redflags’ for immediate attention
- **have access** to clinical staff when needed
- **be aware** of health alerts and transmission-based precautions
- **Support** reception staff when clinical decisions are required
- **update** non-clinical staff on health alerts & notifications

**Patient, family & carers – Benefit** from a safe triage process.

**Policies, procedures and guidelines.**

| Administrative and clinical staff should be able to **describe practice policy** for identifying patients with urgent medical matters |
| Administrative staff need to **assess and prioritise** urgency for care when receiving calls |
| Reception staff should know when to **transfer telephone calls** to GPs or other clinical staff |
| Non-clinical staff should **receive triage training** to recognise medical emergencies and prioritise appointments |

**Good governance for safe triage requires:**

- **Continuous quality improvement**
- **Understanding of clinical justice & medico-legal issues**
- **Risk management processes**
- **Policies and procedures**

This poster is based on Larter’s triage workshop, Triage in General Practice Settings. See [larter.com.au](http://larter.com.au) for our education and training for health professionals.
Triage in general practice settings.
What guides decision making?

Clinical team – Drive the triage process.

To successfully implement a safe triage process, the clinical team must support reception staff. The clinical team need to:

- determine the ‘redflags’ that guide non-clinical staff decision making about urgency and the need for care
- update non-clinical staff on health alerts & notifications
- provide and facilitate triage training
- develop triage policies, procedures and decision-making guides (including who is responsible for calling 000)
- support reception staff when clinical decisions are required

Reception staff – Implement the triage process.

Reception staff are often the first port of call for patient access to care. They are usually non-clinical staff with varied skills, knowledge and experience.

To implement a safe triage process, reception staff need to:

- communicate effectively with patients, families and carers
- have access to up-to-date policies, procedures and flow charts to guide decisions
- determine level of urgency and identify ‘redflags’ for immediate attention
- have access to clinical staff when needed
- be aware of health alerts and transmission-based precautions

Policies, procedures and guidelines.

- Administrative and clinical staff should be able to describe practice policy for identifying patients with urgent medical matters
- Administrative staff need to assess and prioritise urgency for care when receiving calls
- Reception staff should know when to transfer telephone calls to GPs or other clinical staff
- Non-clinical staff should receive triage training to recognise medical emergencies and prioritise appointments

Patient, family & carers – Benefit from a safe triage process.

Good governance for safe triage requires:

- Continuous quality improvement
- Understanding of clinical justice & medico-legal issues
- Risk management processes
- Policies and procedures
